Privacy Policy

PDF Converter - PDF to Word & Image

Effective date: 20 August 2026 • **Last updated:** 20 August 2026 • **Applies to:** version 1.0.0 (Android & iOS)

Summary

PDF Converter - PDF to Word & Image performs every conversion, compression and resize operation entirely on your device. Your files are never uploaded, never transmitted, and never seen by us or by anyone else.

We do not collect personal data. We do not use analytics, crash-reporting or tracking services. There are no user accounts. The app works with the device offline in airplane mode because nothing it does requires a network connection.

1. DATA CONTROLLER

The controller responsible for this application is:

DevNexa LLC
30 N Gould St Ste R
Sheridan, WY 82801, United States
Email: admin@devnexalabs.com

2. INFORMATION WE DO NOT COLLECT

We do not collect, receive, store or process any of the following:

- Your name, email address, phone number or postal address
- Account credentials — the app has no sign-in and no user accounts
- Location data
- Usage analytics, event tracking, session recordings or heatmaps
- Crash reports or diagnostic telemetry
- Contacts, calendar, microphone or health data
- Any content, name, path or metadata belonging to a file you open in the app

We operate no servers, no database and no backend of any kind for this application. There is no mechanism in the app by which your data could reach us.

3. INFORMATION WE COLLECT

None.

The app stores a small number of your own settings on your device only (see section 6). These never leave the device and are not transmitted to us or to any third party.

4. FILE PROCESSING

The app provides twelve tools that convert, compress or resize files:

Category	Tools
PDF	PDF to Word, PDF to Image, Compress PDF
Word	Word to PDF, Compress Word
Images	Image to PDF, JPG to PDF, PNG to PDF, Compress Image, Compress JPG, Compress PNG, Resize Image

4.1 All processing is local

Every one of these tools runs on your device, using processing code that ships inside the application. Specifically:

- PDF files are parsed, rendered and rebuilt on your device.
- Word (.docx) files are unpacked, read and rewritten on your device.
- Images are decoded, re-encoded and resized on your device.

There is no cloud conversion service, no conversion API, no proxy server and no upload path anywhere in the application.

4.2 How a file moves through the app

1. You choose a file using your device's own file picker, photo picker or camera.
2. The app reads that file into memory.
3. The conversion runs on your device's processor.
4. The result is written to the app's private temporary folder on your device.
5. You choose what happens next — save it, share it, open it, or discard it.

At no point in this sequence does the file, or any information derived from it, leave your device.

5. NETWORK ACTIVITY

The application makes no network requests. We have verified this against the source code: the app contains no HTTP client, no socket code, no cloud SDK and no remote URL of any kind. Fonts and animations are bundled inside the application package rather than downloaded.

5.1 About the Android INTERNET permission

The Android manifest declares the INTERNET permission. As of version 1.0.0 the application does not use it: the typeface it once allowed to be downloaded is now shipped inside the app. The permission is therefore declared but unused, and no data is sent through it. We disclose this rather than omit it, because a declared permission is visible to you on the store listing and you are entitled to know what it does — which here is nothing.

6. STORAGE AND RETENTION

6.1 Converted files (temporary)

Results are written to the application's private temporary directory, which is sandboxed by the operating system and not readable by other apps.

- Temporary files are deleted automatically when they are more than 24 hours old, and this cleanup also runs each time the app starts.
- If you leave the result screen without saving, the temporary file is deleted immediately.
- Once you save or share a file, the copy you created belongs to you and is governed by your device and by whichever app you shared it with.

6.2 Settings

The app stores the following on your device using the platform's standard preference storage:

Stored value	Purpose
Interface language	Remembers the language you selected
Theme (light/dark / system)	Remembers your appearance choice
First-launch completed	Shows the introduction only once
Compression notice acknowledged	Remembers that you have seen the Compress PDF warning

That is the complete list. It contains no personal information and no file data.

6.3 Logs

The app writes diagnostic messages to the local device console only, and these are visible only while a developer has the device connected. Logs never leave the device, never contain file contents, and do not contain file names or paths in release builds. There is no remote logging service.

7. THIRD-PARTY SERVICES, ADVERTISING & SUBSCRIPTIONS

No third-party service receives any file data from this application. The app is built with open-source software libraries that run entirely on your device for reading and writing PDF and Office file formats, encoding images, picking and sharing files, and storing your settings. These are code libraries compiled into the app, not services: none of them transmits anything to a third party in the way this app uses them.

> **Advertising:** This app uses Google AdMob to display advertisements. Google and its advertising partners may collect and process certain information, such as advertising identifiers, device information, and usage data, to provide, personalize, measure, and improve advertisements, subject to applicable laws and your consent preferences. You can learn more about how Google uses data at https://policies.google.com/technologies/ads.

> **Subscriptions and Payments:** This app offers optional paid subscriptions that provide access to premium features. Subscriptions and payments are processed through Google Play. We do not directly collect or store your full payment card details. Google Play handles payment processing, subscription management, renewals, and cancellations in accordance with its policies. You can manage or cancel your subscriptions through your Google Play account.

The application contains:

- No analytics SDK
- No crash-reporting service
- No authentication or identity provider
- No cloud storage or cloud processing service

If you choose to share a converted file, your device's own share sheet hands that file to the app you select. What happens to it afterwards is governed by that app's privacy policy, not by ours.

8. PERMISSIONS

The app requests only the permissions its tools need, and only at the moment they are needed. You may decline any of them; the affected feature will simply be unavailable.

Android Permissions:

Permission	Why it is requested
READ_MEDIA_IMAGES	To let you choose photos to convert, compress or resize (Android 13 and later)
READ_EXTERNAL_STORAGE	The same, on Android 12 and earlier
WRITE_EXTERNAL_STORAGE	To save results to shared storage on Android 9 and earlier
CAMERA	Only if you choose to capture a photo instead of picking one (optional hardware)
INTERNET	Declared but unused (see section 5.1)

iOS Permissions:

Permission	Why it is requested
Photo Library	To let you choose photos to convert, compress or resize
Photo Library (add)	To save a converted image back to your library, if you ask for that
Camera	Only if you choose to capture a photo instead of picking one
Files / Documents	To let you choose a document to convert

The app does not request location, contacts, microphone, calendar, Bluetooth, tracking or notification permissions.

9. SECURITY & DATA PROTECTION

- Files are processed on your device; there is no transmission to secure, and no server that could be breached.
- Temporary files live in the app's private sandbox directory, which the operating system protects from other applications.
- Temporary files are removed automatically as described in section 6.1.
- The app holds no credentials, tokens or keys, because it connects to nothing.

> **Data Protection:** We take reasonable measures to protect users' information and handle personal data in accordance with applicable privacy laws. We do not sell users' personal information to third parties.

No method of electronic storage is completely secure. However, because your files never leave your device, the security of your data depends on the security of your own device rather than on ours.

10. YOUR RIGHTS

Data-protection laws including the GDPR and CCPA give you rights to access, correct, delete, export and restrict processing of your personal data. We hold no personal data about you. There is nothing to disclose, correct, export or erase, and nothing to sell. To exercise any right, contact us at **admin@devnexalabs.com**.

11. DATA DELETION

Because we store nothing, there is no account to close. To remove everything: use **Clear cache** in app settings, or **Uninstall the app** to remove temporary files and stored preferences completely.

12. CHILDREN'S PRIVACY

The app is not directed at children and does not knowingly collect personal information from children under 13 (or applicable local age limit). Since no personal data is collected from any user, none is collected from children.

13. INTERNATIONAL DATA TRANSFERS

No data is transferred anywhere. Because the app sends no file information off your device, no cross-border transfer mechanisms such as Standard Contractual Clauses are required.

14. CHANGES TO THIS POLICY

If this policy changes, we will update the "Last updated" date and publish the revised policy. Material changes will be highlighted clearly. We will never transmit your files without stating so plainly first.

15. CONTACT

Questions about this policy or privacy in this application:
